RECENT PROJECTS

Flight Tracker

JAVASCRIPT | MYSQL | WEBPACK | REACT

- Developed a unique web application which allows users to track flights in real time.
- Designed RESTful backend server to archive information and provide a secure login.
- Designed a SQL database with simply separated and sanitized queries using the error first callback method.
- Authentication layer added to provide signup/login abilities utilizing SHA256 hashing algorithm.

API For E-Commerce Application

MYSQL | EXPRESS | NODE.JS | AWS | ARTILLERY

- Developed a scalable backend environment while minimizing query times with schema indexing.
- Implemented an efficient schema design to properly perform a precise ETL process.
- Facilitated API deployment with AWS EC2 instance.
- Confirmed correct operation of front end client connected to the newly created API.
